The approved program standard for Electrical Techniques program of instruction leading to an Ontario College Certificate delivered by Ontario Colleges of Applied Arts and Technology (MTCU funding code 45613)
Permission to Reproduce

Permission is hereby granted to the following institutions to reproduce this document, in whole or in part, in print or by electronic means, for the following specific purposes, subject to the conditions that follow:

1. By an Ontario college of applied arts and technology for the purposes of implementation of the program standard within a college program, including for the purpose of informing students, potential students, program advisory committees or others about programs of study.
2. By an educational institution or school, for the purpose of informing prospective college students about programs of study at Ontario colleges of applied arts and technology.

Conditions:

1. Every reproduction must be marked “© 2009, Queen’s Printer for Ontario” at the beginning of the document or any part of it that is reproduced.
2. No other uses may be made of the document.
3. The document may not be reproduced for sale.
4. The Ministry may revoke the permission to reproduce at any time.

For permission to copy this document, in whole or in part, for other purposes or by other institutions, please contact

Acknowledgements

The Ministry of Training, Colleges and Universities acknowledges with thanks the significant contribution of the many individuals and organizations who participated in the development of this program standard. In particular, the Ministry of Training, Colleges and Universities would like to acknowledge the important roles of

- all individuals and organizations who participated in the consultations;
- the coordinators of Electrical Techniques Programs for their assistance throughout the project, the project officer who led the development of the vocational standard, Bill Fallis, seconded faculty member from George Brown College, and Mireille Deshaies from La Cité collégiale.

I. Introduction

This document is the Program Standard for the Electrical Techniques program of instruction leading to an Ontario College Certificate delivered by Ontario colleges of applied arts and technology (MTCU funding code 45613).

Development of System-Wide Program Standards

In 1993, the Government of Ontario initiated program standards development with the objectives of bringing a greater degree of consistency to college programming offered across the province, broadening the focus of college programs to ensure graduates have the skills to be flexible and to continue to learn and adapt, and providing public accountability for the quality and relevance of college programs.

The Program Standards and Evaluation Unit of the Ministry of Training, Colleges and Universities has responsibility for the development, review, and approval of system-wide standards for programs of instruction at Ontario colleges of applied arts and technology.

Program Standards

Program standards apply to all similar programs of instruction offered by colleges across the province. Each program standard for a postsecondary program includes the following elements:

- **Vocational standard** (the vocationally specific learning outcomes which apply to the program of instruction in question);

- **Essential employability skills** (the essential employability skills learning outcomes which apply to all programs of instruction); and

- **General education requirement** (the requirement for general education in postsecondary programs of instruction).

Collectively, these elements outline the essential skills and knowledge that a student must reliably demonstrate in order to graduate from the program.

Individual colleges of applied arts and technology offering the program of instruction determine the specific program structure, delivery methods, and other curriculum matters to be used in assisting students to achieve the outcomes articulated in the standard. Individual colleges also determine whether additional local learning outcomes will be required to reflect specific local needs and/or interests.
The Expression of Program Standards as Vocational Learning Outcomes

Vocational learning outcomes represent culminating demonstrations of learning and achievement. They are not simply a listing of discrete skills, nor broad statements of knowledge and comprehension. In addition, vocational learning outcomes are interrelated and cannot be viewed in isolation of one another. As such, they should be viewed as a comprehensive whole. They describe performances that demonstrate that significant integrated learning by graduates of the program has been achieved and verified.

Expressing standards as vocational learning outcomes ensures consistency in the outcomes for program graduates, while leaving to the discretion of individual colleges curriculum matters such as the specific program structure and delivery methods.

The Presentation of the Vocational Learning Outcomes

The vocational learning outcome statements set out the culminating demonstration of learning and achievement that the student must reliably demonstrate before graduation.

The elements of the performance for each outcome define and clarify the level and quality of performance necessary to meet the requirements of the vocational learning outcome. However, it is the performance of the vocational learning outcome itself on which students are evaluated. The elements of performance are indicators of the means by which the student may proceed to satisfactory performance of the vocational learning outcome. The elements of performance do not stand alone but rather in reference to the vocational learning outcome of which they form a part.

The Development of a Program Standard

In establishing the standards development initiative, the Government determined that all postsecondary programs of instruction should include vocational skills coupled with a broader set of essential skills. This combination is considered critical to ensuring that college graduates have the skills required to be successful both upon graduation from the college program and throughout their working and personal lives.

A program standard is developed through a broad consultation process involving a range of stakeholders with a direct interest in the program area, including employers, professional associations, universities, secondary schools, and program graduates working in the field, in addition to students, faculty, and administrators at the colleges themselves. It represents a consensus of participating stakeholders on the essential learning that all program graduates should have achieved.
Updating the Program Standard

The Ministry of Training, Colleges and Universities will undertake regular reviews of the vocational learning outcomes for this program to ensure that the Electrical Techniques Program Standard remains appropriate and relevant to the needs of students and employers across the Province of Ontario. To confirm that this document is the most up-to-date release, contact the Ministry of Training, Colleges and Universities at the address or telephone number noted on the inside cover page.
II. Vocational Standard

All graduates of the Electrical Techniques program of instruction must have achieved the 16 vocational learning outcomes listed in the following pages, in addition to achieving the essential employability skills learning outcomes and meeting the general education requirement.

Preamble

Graduates of the Electrical Techniques Program gain basic knowledge of electrical functions within a controlled electrical environment. Graduates have demonstrated achievement of vocational learning outcomes which relate to trade practices under the supervision of a qualified person.

The vocational learning outcomes and their respective elements of the performance are articulated to clearly define the range and level of skills, knowledge, and attitudes required by graduates in order to gain a basic understanding of the electrical field. Graduates of the program have had exposure to a number of electrical functions, such as assisting in the installation, testing, maintaining, and repairing, analyzing and troubleshooting specified electrical circuits, equipment, and systems, under the supervision of a qualified person. Graduates have a basic understanding of the principles and will need more theory and practical hands on training to be safe and productive in the electrical industry.

At this point in their training, graduates may find employment in the manufacturing sector, as assemblers, testers, or as salespersons for an electrical parts supplier. Graduates wishing to work in the electrical field (e.g., power distribution and utilization; electrical power generation, and protection; electrical maintenance and installation; and basic control systems) would require further education or apprenticeship training.

This program standard has identified a cluster of common skills, knowledge, and attitudes essential to entry-level employees in the electrical field; however, individual programs may choose to build on this standard by offering some degree of specialization.

Graduates may be granted some credits towards apprenticeship certification. Students should contact individual colleges for further details of a college's articulation agreements with training facilities, institutions or professional associations.
Synopsis of the Vocational Learning Outcomes
Electrical Techniques Program

The graduate has reliably demonstrated the ability to

1. assist in the interpretation and preparation of electrical drawings including other related documents and graphics.
2. analyze and solve simple technical problems related to basic electrical systems by applying mathematics and science principles.
3. use and maintain test and instrumentation equipment.
4. assemble basic electrical circuits and equipment to fulfill requirements and specifications under the supervision of a qualified person.
5. assist in the installation and troubleshooting of basic electrical machines and associated control systems under the supervision of a qualified person.
6. assist in testing and troubleshooting electrical and electronic circuits, equipment, and systems by using established procedures under the supervision of a qualified person.
7. assist in the troubleshooting of control systems under the supervision of a qualified person.
8. use computer skills and tools to solve basic electrical related problems.
9. assist in conducting quality assurance procedures under the supervision of a qualified person.
10. assist in the preparation and maintenance of records and documentation systems.
11. install and assist in testing telecommunication systems under the supervision of a qualified person.
12. apply health and safety standards and best practices to workplaces.
13. perform tasks in accordance with relevant legislation, policies, procedures, standards, regulations, and ethical principles.
14. apply basic electrical cabling requirements and install and test system grounding for a specified number of applications under the supervision of a qualified person.
15. identify problems and troubleshoot electrical systems under the supervision of a qualified person.
16. assist in the selection of electrical equipment, systems and components to fulfill the requirements and specifications under the supervision of a qualified person.

Note: The learning outcomes have been numbered as a point of reference; numbering does not imply prioritization, sequencing, nor weighting of significance.
The Vocational Learning Outcomes

1. The graduate has reliably demonstrated the ability to assist in the interpretation and preparation of electrical drawings including other related documents and graphics.

Elements of the Performance

- select tools and equipment to produce, reproduce or modify basic drawings (e.g., Computer Aided Design (CAD) software);
- assist in the interpretation of applicable codes and standard symbols in the production of drawings;
- assist in the interpretation of graphics such as single-line drawings, electronic schematics, and assembly drawings to convey technical information;
- assist in the interpretation and preparation of electrical specifications and project related documents;
- assist in the preparation of equipment lists and bills of materials;
- assist in the interpretation of circuit diagrams.
2. The graduate has reliably demonstrated the ability to
analyze and solve simple technical problems related to basic electrical systems by applying mathematics and science principles.

Elements of the Performance

- use mathematical and scientific applications to solve simple technical problems (e.g., basic algebra and trigonometry);
- apply accurately mathematical and scientific concepts to troubleshoot, maintain, and test electrical circuits and equipment;
- assist in the identification of simple technical problems related to basic electrical systems and formulate alternative solutions;
- use appropriate software for calculations;
- interpret and support the results of calculations;
- assist in the performance of conversion in and among number systems such as hexadecimal, decimal, octal, binary, and binary-coded decimal.
3. *The graduate has reliably demonstrated the ability to*

use and maintain test and instrumentation equipment.

**Elements of the Performance**

- select and safely use a variety of instrumentation equipment (e.g., multimeters);
- perform basic measurements such as power, voltage, resistance, and current using appropriate instrumentation equipment;
- use test equipment to monitor and troubleshoot circuits;
- troubleshoot and test basic electrical and electronic circuits using appropriate instrumentation equipment;
- identify and eliminate hazards while using and maintaining test and instrumentation equipment, by complying with the appropriate safety standards.
4. *The graduate has reliably demonstrated the ability to*

assemble basic electrical circuits and equipment to fulfill requirements and specifications under the supervision of a qualified person.

**Elements of the Performance**

- assemble equipment based on requirements and specifications;
- assist in the installation of equipment protective devices such as fuses, circuit breakers, and instrument transformers;
- assist in the installation of automation and control systems;
- identify wiring requirements for basic electrical installations;
- apply Electrostatic Discharge (ESD) procedures when handling electrical components.
5. *The graduate has reliably demonstrated the ability to*

*assist in the installation and troubleshooting of basic electrical machines and associated control systems under the supervision of a qualified person.*

**Elements of the Performance**

- assist in the installation and testing of alternating current (AC) and direct current (DC) machines and their control systems, general requirements and specific applications;
- apply principles of safety for the operation of basic electrical machines;
- assist in the installation of basic electrical machines based on industrial design and regulating standards, and applicable legislation (e.g., frame size and types, torque class);
- assist in the installation of AC and DC motor drives and control systems.
6. *The graduate has reliably demonstrated the ability to*

   assist in testing and troubleshooting electrical and electronic circuits, equipment, and systems by using established procedures under the supervision of a qualified person.

**Elements of the Performance**

- identify problems in circuits and equipment by using established procedures;
- use standard test equipment;
- use available information resources to assist in troubleshooting;
- test, maintain, and perform basic repairs and/or replace equipment;
- assist in upgrading equipment when appropriate;
- operate equipment according to manufacturers’ requirements and specifications;
- follow established service and preventative maintenance schedules;
- assist in troubleshooting basic electrical systems;
- assist in documenting procedures;
- analyze and troubleshoot simple network wires that could be connected to analog, digital, power electronic, and/or electromechanical devices.
7. The graduate has reliably demonstrated the ability to assist in the troubleshooting of control systems under the supervision of a qualified person.

Elements of the Performance

- assist in applying, installing, testing, and troubleshooting Programmable Logic Controllers (PLC);
- assist in testing semiconductor and electromechanical switching circuits;
- assist in analyzing open and closed loop control systems;
- assist in testing and troubleshooting motor speed control and servo systems.
8. *The graduate has reliably demonstrated the ability to*

use computer skills and tools to solve basic electrical related problems.

**Elements of the Performance**

- use appropriate software to resolve basic technical problems;
- research and share information resources from the Internet such as reference manuals, handbooks, quick start guides, knowledge bases, and databases;
- use appropriate software as an analysis tool;
- use appropriate software to document electrical and electronic circuits.
9. *The graduate has reliably demonstrated the ability to*

assist in conducting quality assurance procedures under the supervision of a qualified person.

**Elements of the Performance**

- record specifications applicable to electrical circuits, equipment, and systems for quality assurance purposes;
- assist in monitoring and reporting test results in accordance with organizational quality assurance procedures and specifications;
- assist in conducting quality assurance testing by utilizing appropriate equipment and report results;
- assist in the application of standards from relevant quality assurance programs, and report results.
10. *The graduate has reliably demonstrated the ability to*

assist in the preparation and maintenance of records and documentation systems.

**Elements of the Performance**

- use electronic and/or paper-based systems to store and retrieve information, and to assist in the preparation of reports;
- assist in maintaining current, clear, and accurate documents;
- assist in documenting the testing and modification of electrical and electronic systems;
- document all work accurately to comply with electrical standards.
11. *The graduate has reliably demonstrated the ability to*

install and assist in testing telecommunication systems under the supervision of a qualified person.

**Elements of the Performance**

- install and assist in testing wiring communication systems such as audio, video, and data systems;
- install and assist in testing the wiring of Local Area and Wide Area Networks (LANs and WANs) using appropriate devices;
- install and assist in testing the wiring of communication systems such as emergency, fire alarm, and other security systems.
12. *The graduate has reliably demonstrated the ability to*

apply health and safety standards and best practices to workplaces.

**Elements of the Performance**

- use personal protective equipment (PPE) and clothing to ensure personal health and safety in all workplaces, including arc flash;
- select, operate, and maintain hand and power tools safely;
- interpret and apply safety codes, policies and practices, and accident prevention procedures;
- recognize safe working conditions and report hazardous conditions;
- apply regulatory and licensing requirements when completing installations, maintenance, and repairs of electrical equipment;
- apply procedures for the safe handling, storage, and disposal of hazardous materials such as Workplace Hazardous Materials Information System (WHMIS) and Transporting of Dangerous Goods (TDG);
- apply best practice at workplaces (e.g. keep premises clean and secure).
13. *The graduate has reliably demonstrated the ability to*

perform tasks in accordance with relevant legislation, policies, procedures, standards, regulations, and ethical principles.

**Elements of the Performance**

- interpret and comply with project specifications and drawings;
- adhere to legislation, codes, and standards including occupational health and safety regulations, and labour laws;
- use equipment and materials in accordance with relevant legislation, standards, and codes;
- adhere to professional ethics, as established by the professional association that governs the province;
- work to enhance the positive environmental, ecological, and social impact of all tasks.
14. *The graduate has reliably demonstrated the ability to*

apply basic electrical cabling requirements and install and test system
grounding for a specified number of applications under the supervision of a
qualified person.

**Elements of the Performance**

- interpret basic electrical drawings related to cabling and system grounding;
- apply basic electrical cabling and wiring building practices in accordance with
  applicable electrical and safety codes;
- apply basic codes, procedures, and processes to assist in the testing of system
  grounding;
- assist in the identification of systems faults and instabilities;
- assist in the preparation of common wire and cable lists and assemblies according
to the Electrical Code of the province or country where the equipment will be in
operation.
15.  *The graduate has reliably demonstrated the ability to*

identify problems and troubleshoot electrical systems under the supervision of a qualified person.

**Elements of the Performance**

- apply the relationship between voltages and currents to resolve problems;
- interpret basic electrical drawings related to systems;
- assist in installing and maintaining equipment protective devices such as fuses, circuit breakers, instrument transformers, relays, and associated equipment;
- assist in the installation, testing and maintaining of control systems to meet requirements and specifications according to criteria such as voltage or current impedances, and operating environment.
16. *The graduate has reliably demonstrated the ability to*

assist in the selection of electrical equipment, systems and components to fulfill the requirements and specifications under the supervision of a qualified person.

**Elements of the Performance**

- contact manufacturers and suppliers to obtain information on appropriate equipment, systems and components;
- adhere to requirements and specifications of the equipment, components, and systems;
- identify adequate substitutes when necessary by consulting manufacturers' specifications, catalogues, and electronic sources (e.g., Internet, CD-ROM).
III. Essential Employability Skills

All graduates of the Electrical Techniques program of instruction must have reliably demonstrated the essential employability skills learning outcomes listed on the following pages, in addition to achieving the vocational learning outcomes and meeting the general education requirement.

Context

Essential Employability Skills (EES) are skills that, regardless of a student’s program or discipline, are critical for success in the workplace, in day-to-day living, and for lifelong learning.

The teaching and attainment of these EES for students in, and graduates from, Ontario’s colleges of applied arts and technology are anchored in a set of three fundamental assumptions:

- these skills are important for every adult to function successfully in society today;
- our colleges are well equipped and well positioned to prepare graduates with these skills;
- these skills are equally valuable for all graduates, regardless of the level of their credential, whether they pursue a career path, or they pursue further education.

Skill Categories

To capture these skills, the following six categories define the essential areas where graduates must demonstrate skills and knowledge.

- Communication
- Numeracy
- Critical Thinking & Problem Solving
- Information Management
- Interpersonal
- Personal
Application and Implementation

In each of the six skill categories, there are a number of defining skills, or sub skills, identified to further articulate the requisite skills identified in the main skill categories. The following chart illustrates the relationship between the skill categories, the defining skills within the categories, and learning outcomes to be achieved by graduates from all postsecondary programs of instruction that lead to an Ontario College credential.

EES may be embedded in General Education or vocational courses, or developed through discrete courses. However these skills are developed, all graduates with Ontario College credentials must be able to reliably demonstrate the essential skills required in each of the six categories.

11. take responsibility for one’s own actions, decisions, and consequences.                              |
IV. General Education Requirement

All graduates of the Electrical Techniques program must have met the general education requirement described on the following pages, in addition to achieving the vocational and essential employability skills learning outcomes.

Requirement

The General Education Requirement for programs of instruction is stipulated in the Credentials Framework (Appendix A in the Minister’s Binding Policy Directive Framework for Programs of Instruction).

In programs of instruction leading to either an Ontario College Diploma or an Ontario College Advanced Diploma, it is required that graduates have been engaged in learning that exposes them to at least one discipline outside their main field of study, and increases their awareness of the society and culture in which they live and work. This will typically be accomplished by students taking 3 to 5 courses (or the equivalent) designed discretely and separately from vocational learning opportunities.

This general education learning would normally be delivered using a combination of required and elective processes.

Purpose

The purpose of General Education in the Ontario college system is to contribute to the development of citizens who are conscious of the diversity, complexity, and richness of the human experience; who are able to establish meaning through this consciousness; and, who, as a result, are able to contribute thoughtfully, creatively, and positively to the society in which they live and work.

General Education strengthens student’s essential employability skills, such as critical analysis, problem solving, and communication, in the context of an exploration of topics with broad-based personal and/or societal importance.
Themes

The themes listed below will be used to provide direction to colleges in the development and identification of courses that are designed to fulfill the General Education Requirement for programs of instructions.

Each theme provides a statement of Rationale and offers suggestions related to more specific topic areas that could be explored within each area. These suggestions are neither prescriptive nor exhaustive. They are included to provide guidance regarding the nature and scope of content that would be judged as meeting the intent and overall goals of General Education.

1. Arts in Society:

Rationale:
The capacity of a person to recognize and evaluate artistic and creative achievements is useful in many aspects of his/her life. Since artistic expression is a fundamentally human activity, which both reflects and anticipates developments in the larger culture, its study will enhance the student’s cultural and self-awareness.

Content:
Courses in this area should provide students with an understanding of the importance of visual and creative arts in human affairs, of the artist’s and writer’s perceptions of the world and the means by which those perceptions are translated into the language of literature and artistic expression. They will also provide an appreciation of the aesthetic values used in examining works of art and possibly, a direct experience in expressing perceptions in an artistic medium.

2. Civic Life:

Rationale:
In order for individuals to live responsibly and to reach their potential as individuals and as citizens of society, they need to understand the patterns of human relationships that underlie the orderly interactions of a society’s various structural units. Informed people will have knowledge of the meaning of civic life in relation to diverse communities at the local, national, and global level, and an awareness of international issues and the effects of these on Canada, and Canada’s place in the international community.

Content:
Courses in this area should provide students with an understanding of the meaning of freedoms, rights, and participation in community and public life, in addition to a working knowledge of the structure and function of various levels of government (municipal, provincial, national) in Canada and/or in an international context. They may also provide an historical understanding of major political issues affecting relations between the various levels of government in Canada and their constituents.
3. **Social and Cultural Understanding:**

*Rationale:*
Knowledge of the patterns and precedents of the past provide the means for a person to gain an awareness of his or her place in contemporary culture and society. In addition to this awareness, students will acquire a sense of the main currents of their culture and that of other cultures over an extended period of time in order to link personal history to the broader study of culture.

*Content:*
Courses in this area are those that deal broadly with major social and cultural themes. These courses may also stress the nature and validity of historical evidence and the variety of historical interpretation of events. Courses will provide the students with a view and understanding of the impact of cultural, social, ethnic, or linguistic characteristics.

4. **Personal Understanding:**

*Rationale:*
Educated people are equipped for life-long understanding and development of themselves as integrated physiological and psychological entities. They are aware of the ideal need to be fully functioning persons: mentally, physically, emotionally, socially, spiritually, and vocationally.

*Content:*
Courses in this area will focus on understanding the individual: his or her evolution; situation; relationship with others; place in the environment and universe; achievements and problems; and his or her meaning and purpose. They will also allow students the opportunity to study institutionalized human social behaviour in a systematic way. Courses fulfilling this requirement may be oriented to the study of the individual within a variety of contexts.

5. **Science and Technology:**

*Rationale:*
Matter and energy are universal concepts in science, forming a basis for understanding the interactions that occur in living and non-living systems in our universe. Study in this area provides an understanding of the behaviour of matter that provides a foundation for further scientific study and the creation of broader understanding about natural phenomena.
Similarly, the various applications and developments in the area of technology have an increasing impact on all aspects of human endeavour and have numerous social, economic, and philosophical implications. For example, the operation of computers to process data at high speed has invoked an interaction between machines and the human mind that is unique in human history. This development and other technological developments have a powerful impact on how we deal with many of the complex questions in our society.

Content:
Courses in this area should stress scientific inquiry and deal with basic or fundamental questions of science rather than applied ones. They may be formulated from traditional basic courses in such areas of study as biology, chemistry, physics, astronomy, geology, or agriculture. As well, courses related to understanding the role and functions of computers (e.g., data management and information processing), and assorted computer-related technologies, should be offered in a non-applied manner to provide students with an opportunity to explore the impact of these concepts and practices on their lives.
